BUILDING THE TWIN

Simulation I

Module 7 · Building and calibrating the engine of the twin

Transport Twin Study Path

Choose the zoom level

Macro and meso

Flows or platoons

Regions and cities

Fast

Micro

Every vehicle and driver

Corridors and junctions

Detailed but slow

Inside a microscopic model

- Car-following: Krauss, IDM, Gipps, Wiedemann
- Lane-changing and gap acceptance
- Route choice and dynamic assignment

Building in SUMO

Calibrate, then validate

GEH < 5 on ≥ 85% of links

Then check travel times on different days

One run is not a result

Use several random seeds

Report the mean and the range
